

Transition from OPEN FIELD to #AEROponics in the GREENHOUSE

An automated solution for leafy vegetables and herbs.

Plants grow in **mobile modules** and their roots are nourished by a **spraying robot**.

Benefits by growing with **Greenova** system

- Supply your clients **all year long**.
- **Higher yields** per square meter.
- **Multiple harvests** for your crops.
- Suitable for new **indoor growers**.
- Large choice of **varieties**.
- Longer **shelf life**.
- **No cleaning** required.
- **Better working conditions**.

GREENOVA

is a leafy green grower that needed to play for Kuwait's food security by defeating the hot climate and 70% fresh produce import, having high quality crops 24/7 and minimizing resources. As our system is perfectly adapted to this hot conditions with optimal control of root zone area, they installed the first **6000m2** AEROponics Greenhouse in the Gulf Region.

is a french ready-to-eat lettuce and herb processor that needed to securize its aromatic herbs supply with a local solution as it was mostly procured from countries facing immense water pressure. They achieved this by installing with us a **6000m2** Greenhouse and now they can produce high quality products 24/7 such as basil, mint, corianer, and many more aromatic herbs.

“CleanGreens system assures quality, consistency and productivity that goes beyond our expectations.”

Jeremy Blondin, Domaine des Mattines, Geneva
